

DeltaFlow Labs Roadmap

Overview

DeltaFlow Labs is building market intelligence infrastructure for quantitative research, market structure analytics, and automation systems.

Our roadmap focuses on creating a unified ecosystem that transforms raw market data into actionable research insights through scalable software architecture.

Phase 1 — Foundation (2026)

DeltaFlow Engine

Objective:

Develop the core market structure intelligence framework.

Key Deliverables:

- Swing High / Swing Low Detection
- Internal Structure Mapping
- External Structure Mapping
- Break of Structure (BOS) Detection
- Change of Character (CHoCH) Detection
- Inducement Identification
- Liquidity Mapping
- Multi-Timeframe Analysis

Status:

Active Development

ICT SMT Bot

Objective:

Research and automate SMT divergence analysis across correlated markets.

Key Deliverables:

- SMT Detection Engine
- Cross-Market Correlation Analysis
- Automated Monitoring

- Alert Generation System
- Research Dashboard Integration

Status:

Active Development

Research Dashboard

Objective:

Create a centralized interface for market intelligence monitoring.

Key Deliverables:

- Real-Time Market Visualization
- Market Structure Overlay
- Trend State Analysis
- Alert Management
- Performance Monitoring

Status:

Planned

Phase 2 — Intelligence Layer (2026–2027)

Advanced Analytics

Objective:

Enhance market interpretation through structured analytics.

Key Deliverables:

- Trend Classification Models
- Liquidity Event Analytics
- Market Regime Detection
- Statistical Analysis Modules
- Signal Quality Evaluation

Status:

Research Phase

Backtesting Infrastructure

Objective:

Build a robust framework for validating research hypotheses.

Key Deliverables:

- Historical Data Processing
- Strategy Replay Engine
- Performance Metrics
- Risk Analysis Framework
- Optimization Tools

Status:

In Development

Multi-Strategy Framework

Objective:

Support multiple independent research modules within a unified platform.

Key Deliverables:

- Strategy Management Layer
- Modular Signal Engine
- Shared Analytics Infrastructure
- Unified Reporting System

Status:

Planned

Phase 3 — Platform Expansion (2027)

AI-Assisted Market Intelligence

Objective:

Integrate machine learning and AI-powered analysis into the research workflow.

Key Deliverables:

- Pattern Recognition Systems

- Research Assistant Tools
- Market Classification Models
- Decision Support Frameworks

Status:

Future Development

Portfolio Analytics

Objective:

Expand from strategy-level analysis to portfolio-level intelligence.

Key Deliverables:

- Portfolio Monitoring
- Exposure Analysis
- Performance Attribution
- Risk Visualization

Status:

Future Development

Cloud-Native Infrastructure

Objective:

Scale DeltaFlow Labs into a cloud-first research platform.

Key Deliverables:

- AWS Infrastructure
- Distributed Processing
- API Services
- Enterprise Dashboard
- User Management Systems

Status:

Future Development

Long-Term Vision

DeltaFlow Labs aims to become a comprehensive market intelligence platform that combines:

- Quantitative Research
- Market Structure Analytics
- Real-Time Monitoring
- Automation Infrastructure
- AI-Assisted Decision Support

Our goal is to empower researchers, developers, and market participants with tools that simplify complex market behavior and enable data-driven decision making.

Current Focus

Current priorities include:

1. DeltaFlow Engine Development
 2. ICT SMT Bot Enhancement
 3. Research Dashboard Infrastructure
 4. Real-Time Data Processing
 5. Market Structure Analytics
